ECO TILL RADISH

KEY CHARACTERISTICS

- Strong taproot extends deep into the soil to provide a wide variety of benefits for next year's crop. The thin portion of the taproot can grow to 6' while the thicker upper portion grows to 24 inches. This taproot system reduces soil compaction, provides aeration and water infiltration and returns nutrients to the soil surface. This system helps reduce soil compaction, suppress weeds and builds organic matter.

Seeding Rate= Conventional or No-till: 8-10 lbs./ac. Broadcast: 12-15 lbs./ac.
