EXPRESS II

PLANT CHARACTERISTICS

Late maturity
High forage yield potential
Excellent forage quality
Dark green color
Strong summer regrowth after cutting
Excellent spring vigor, plant health, and also very winter hardy
Longer harvest window

EXPLOSIVE SPRING VIGOR & REGROWTH

Express II is a late maturing timothy variety with a heading date approximately one week later than Climax and a substantial yield advantage as shown below. Express II is taller in plant height and has a longer panicle than Climax along with superior foliar disease resistance. Express II is excellent in mixtures with legumes and for fields where later hay harvests are required due to wet soil conditions. In pure stands, Express II's high forage yield and quality makes it ideal for premium horse and other livestock hay.

Performance Data – Forage Yield (T/A dry matter)

Entry	IN (4)	PA (2)	TN (2)	WA (2)	WI (2)	Total Years	% Mean
Express II	16.28	13.46	7.37	19.11	6.45	12	100
Climax	16.21	13.04	7.11	17.66	6.00	12	96
