AESCHYNOMENE

DESCRIPTION

- A warm season legume which grows 3' - 8' tall. Grows best where adequate moisture is present. Produces very high feed value (19% protein). Ideal and palatable for cattle, goats, sheep and wildlife consumption. Grows well with Bahia Grass or by itself. Aeschynomene will reseed if planted in subtropical climates. Plant during warm season when adequate moisture is present. Nematode resistance which is important for southern forage supplements.

IDEAL USE FOR

- Wildlife Food Plots
- Grazing
- Forage Production

PLANT CHARACTERISTICS

Plant Height	3' - 8'
Self Seeding	Yes
Fine Stemmed	Yes
Wet Soil Tolerance	Excellent
Dry Soil Tolerance	Good

SEEDING MANAGEMENT

Seeding Rate _____ **10-12 lbs./ac (hulled seed)**
Seeding Date _____ **April - June**
To insure higher rate of germination seed when soil has reached adequate moisture.

SEED INOCULANT

EL Type (cowpea inoculant)
