A MESSAGE TO OUR CUSTOMERS

THANK YOU FOR YOUR BUSINESS. WE HIGHLY VALUE YOUR TRUST IN OUR PRODUCTS & SERVICE.

To Our Valued Customers,

On behalf of SEEDWAY, LLC we would like to thank you for your continued trust and loyalty in SEEDWAY in these uncertain times. Our commitment toward you has never been stronger as we face the global Covid-19 pandemic. The health and well-being of our customers, suppliers, associates, their families, and the communities where we operate are of utmost importance.

We are in the midst of a pandemic like none of us, our parents, and our grandparents have ever had to face. Not only are we contending with a virus that has altered the way we live our lives, it has changed the way we do everything.

There are many uncertainties about what is to come, but one thing is certain **Agriculture Is Essential**.

Many of you run the world's most essential industry – agriculture. Your acts of selflessness to remain and continue to play a vital role in the food supply chain does not go unnoticed.

In our industry we are no stranger to the term adversity, but, more so, we are also no stranger to the term perseverance. For 57 years, SEEDWAY has, and will, continue to be at the ready for you when the industry presents challenges and opportunities.

Thank you for your ongoing trust in SEEDWAY – in good times, and, even more so, in challenging times.

With warm regards,

SEEDWAY VEGETABLE

BEANS PEA & BEAN INOCULANT *Treats Up To 50 lbs*

Product Code	Variety	Price
878100	Using an inoculant results in better plant and root system growth for legumes. Legume plants produce their own nitrogen through a relationship with bacteria called Rhizobia which is in the inoculant as well as in the soil, but the Rhizobia in the soil are not as active in cool, wet soils. Adding the inoculant gives your legumes a jump start. This is an all-natural product (but it is not organically certified).	9.45

Code	Variety	Days	Head Traits	Color	Market Season	Comments
9740	LIEUTENANT	58	Smooth dome, med-small beads	Dark green	Spring	Lieutenant is an early maturing variety for spring seeding that rivals main season broccoli in quality. It holds better than others in its class and is less likely to have problems. It may work in fall, but not if early growth is during hot weather.
4424 NT	JACARANDA	58	Smooth, shallow dome	Deep purple/ blue green	Late Spring, Fall	Perfect for the specialty market, Jacaranda makes a unique, purple head with early maturity. Easy to grow, although we recommend avoiding the first crops in early spring.
4471	BURGUNDY	58	Florets with fine beads	Burgundy/ purple	Widely adapted	This striking purple shoot-type broccoli is easy to grow, and can be planted in most slots. Snap out, and sell, the first shoots from the center of the plant and it will quickly send up side shoots. The shoot stems and florettes are sweet and tender. Color is best when raw or quickly steamed.
7681	EASTERN CROWN	58	Medium-high, smooth dome	Blue green	Widely adapted	This heat tolerant, early maturing variety holds in the field extremely well and will keep its nice dark green color in hot weather.
4195	NEW WOLFMAN	58	Medium dome, smooth	Green	Spring and Fall In The North	This is a bunching-only variety producing smaller heads held above the plant. Make sure to plant at higher populations.
5232	EMERALD CROWN	60	High smooth dome, med-small beads	Blue green	Widely adapted	Produces a uniform, solid and heavy head for crown cut. Heads resist purpling in cooler weather. Emerald Crown handles warmer weather well, allowing for later spring harvest and summer seeding for late summer harvest. Most widely adapted variety for climates with weather extremes.

Code	Variety	Days	Head Traits	Color	Market Season	Comments
6330	**GREEN MAGIC**	62	Domed, mostly smooth, med-fine beads	Green	Spring, fall	Widely adapted and dependable, fancy quality heads. Sturdy and heavy. Good uniformity and holding ability. Pictured on page 10.
4470	**MONTEBELLO**	62	Separate florets	Green	Widely adapted	For those wanting to grow separate shoots of broccoli, Montebello is the most reliable variety we have seen. Break out the initial head (which is salable) and you will get many shoots growing right back. Long, green stems have tight cluster of beads to make a small floret. Very sweet.
9202	**GYPSY**	63	Domed	Blue green	Early spring, fall	Gypsy had good vigor and so is a good fit for heavy soils or marginal fertility. It produces a beautiful blue-green head that can be used for bunching or crown cut.
4532	**ABRAMS**		Medium dome, smooth	Green	Cool to warm	While most new broccoli varieties have their heads deep in the plant, Abrams' head sits above a tall and vigorous plant. Couple that with excellent uniformity and your harvest crew will cut Abrams faster and easier than most other varieties. It is a very good choice for bunching and can also be used for crown cut. It has moderate heat tolerance and is one of the best varieties to plant early in a cool to warm slot.
6764	**DIPLOMAT**	67	Semi-dome	Dark blue green	Spring, summer, fall	Offers a good combination of heat tolerance and head quality. A long clean stem makes Diplomat good for bunching.
7772	**EASTERN MAGIC**	68	High dome, medium-small beads	Blue green		Featuring very good heat tolerance and excellent field holding, Eastern Magic makes dark green, very high and dense dome heads.
8237	**IMPERIAL**	71	Medium dome, small beads	Dark green	Spring, summer, fall	Imperial produces fancy quality in warm weather and is good for spring, summer and early fall crops (and winter in the South). If you think your conditions are too warm to grow broccoli, give Imperial a try. Best for crown cut. Imperial maturity may be affected by heat/day-length.
7892	**ASTEROID**	71	Medium dome, small beads	Deep green	Spring, fall	With excellent uniformity, and good heat tolerance, Asteroid is widely adapted for both spring and summer seeding. It is an excellent choice for bunching.
7809	**EMERALD STAR**	74	Tight dome, fine beads	Blue green	Warm, Hot to cool	Maturing a few days after Imperial, Emerald Star brings a new level of heat to a later maturing slot. Field holding is excellent. The plant is vigorous and tall. It is used mostly for crown cut. Heads are dense and heavy.
5114	**AVENGER**	80	Smooth dome, fine beads	Blue green	Fall, late fall	Avenger is for mid to late fall harvest in cool to cold weather. Heads are large with a dense, high, smooth dome. Avenger matures mid-season in early fall plantings, and very late in mid to late fall plantings.

BEJO & SEEDWAY: LEADING THE WAY WITH IMPROVED CARROT VARIETIES

CARROTS Daucus carota var. Sativus *10,000 to 24,000 seeds/oz.*

Generally, stone-free sandy loam or organic soils are best to insure good yields and uniform carrot shape. Planting into well drained soil will help avoid water stress and soil disease such as Phythium. Raised beds are recommended to help maximize root length and overall yield.

Carrots prefer a pH between 6.2 and 6.8 and good fertility. Typical per acre fertilization rates are 75 lb. N, 100 lb. P_2O_2, and 200 lb. K_2O for muck soils, and 120 lb. N, 75 lb. P_2O_2, and 150 lb. K_2O on mineral soils.

Seed should be sown into a well prepared seedbed 1/4" deep. Avoid soils with a tendency to crust. Light irrigation may be required to keep the seedbed moist for germination. After emergence, avoid over irrigation; grow on the dry side and allow seedlings to elongate to reach moisture.

Intended use	Seeds per Row Foot	Approx. Seeds per Acre

Code	Variety	Days	Head Description	Plant	Self Wrapping	Comments
8534	**MINUTEMAN**	53	6” - 7”, Domed	Medium, vigorous	No	An early variety with good head density and weight. Good early performance and widely adapted for all but the hottest season.
7643	**FUJIYAMA**	64	6” - 8”, Domed	Med-large	Partial	Get a jump on summer cauliflower with this tropical type. Fujiyama needs heat to make a big plant, but in heat it will make a medium-sized, sweet tasting head. Maturity is outstandingly uniform. When slotted right, the plant gets nice and big, but should be tied for a truly white head. In South Central PA, we do not seed earlier than the 1st week in June for crops beginning mid-August.
6449	**BERMEO**	65	6”, Domed, dense	Med-large	Excellent	Bermeo features the best inner wrap we have seen on an early maturing, heat tolerant cauliflower. It also has excellent uniformity with high domed, dense, medium-sized heads.
8983	**STEADY**	66	6” - 7”, Domed, dense	Medium	Partial	Offers improved uniformity for its maturity, with solid white heads. Steady has good heat tolerance and performs well in spring and fall. Good inner wrap.
5381	**CLARIFY**	66	7” - 8”, Medium dome	Very large	Very Good	Early main-season variety that is heat tolerant and has the biggest plant in its maturity. It is one of the few varieties with Club Root resistance, but, even if that isn’t a problem, Clarify is well worth trying.
5077	**FREEDOM**	67	6” - 7”, Domed, dense	Medium	Partial	Spring-fall, vigorous, self blanching, high quality.
7599	**AQUARIUS**	69	6” - 8”, Domed, dense	Large, vigorous	Good	Aquarius offers a large leafy plant and very good uniformity. It is widely adapted, does well in warm weather, and can get large heads.
5335	**ALCALA**	69	5”- 7”, High domed	Large	Excellent	Alcala has a tight and complete wrap when harvested at a smaller (12 count) size. Heads can get larger but will need to be tied. Heads are high round and dense. Good heat tolerance and widely adapted.
6690QI	**FLAMENCO**	71	7” - 9”, Domed, dense	Med-large, erect, vigorous	Very Good	Our favorite variety for fall production with an excellent wrap and fancy dense heads. Widely adapted, including the Southeast in winter. The outer frame leaves are long and erect for added shading from the sun.
4262	NEW **TWISTER**	71	Medium-large, heavy headed	Medium	Good	Twister is widely adapted both regionally and in planting date, working from spring through late fall and in winter in the South. Twister has a good heat tolerance coupled with a big vigorous plant and distinctive twisted leaves. The wrap is so good and large that you will likely not have to band it.
5391	**TOLEDO**	75	7”, High dome	Extra large	Excellent	Toledo is a fantastic variety for maturing in cool weather. With a very large plant and complete inner wrap, Toledo has a pure white, heavy head and excellent uniformity in its maturity.
6367	**ABSOLUTE**	75	6” - 8”, Domed, dense	Med-large, erect, vigorous	Very Good	Absolute features excellent uniformity and bright white color, even if the wrap pulls away from the head. In cooler areas, Absolute can be used in spring.
8340	**AMAZING**	75	7” - 8”, Deep domed, dense	Large	Very Good	Vigorous plant. Wide wrappers provide good protection. Amazing is good if you don’t want everything to mature at one time. It is best for harvesting during cool weather and not for spring.

9244	**VERONICA**	77	7"- 8". Spiraled heads are uniform in size and maturity. Veronica has good heat tolerance and can be planted to mature in late summer through late fall. Romanesco has a very dense head with a mild and nutty flavor. It is grown like cauliflower.

Code	Variety	Days	Head Description	Plant	Comments
4348	**CLEMENTINE** NEW	66	Medium, intense glowing orange	Medium	Clementine brings a whole new level of eye-popping color to your cauliflower mix. We do not yet know spring seeding performance, but for fall crops, Clementine will be about 4-5 days earlier than Flamestar. Compared to Flamestar, uniformity and field holding ability are similar (and excellent) but Clementine will weigh slightly less. We think both belong in your mix!
6368	**CHEDDAR**	67	6" - 7", Domed, orange	Small-medium	Appealing orange curd. Tastes great raw or cooked! Recommended for fall or early spring. Not heat tolerant but otherwise *very easy to grow.*
7899	**DePURPLE**	67	6" - 7", Medium dome, violet purple	Large	This stunning replacement for Graffiti produces larger, heavier heads at an earlier maturity. The floret stems are white and attractive when cut. It tastes good raw and holds its color when cooked. It shows sufficient heat tolerance to be used in a spring seeding. The plant is large and strong.
7642	**FLAMESTAR**	70	7" - 9", High dome, creamy orange	Med-large	This easy to grow, golden orange cauliflower makes a large, heavy head that is nearly problem free with great uniformity. Compared to Cheddar, the color may be lighter, but the weight and size is better.
4179	**VITAVERDE** NEW	72	Big, heavy green heads	Large	This high quality green cauliflower is not only early but adapted to most seasons including spring.The plant habit is upright and vigorous. In addition, the curd is heavy with excellent color.
8351	**SUSANA**	84	6" - 7", Medium dome, minty to chartreuse	Large	Large, beautiful, green heads with good cold tolerance.

SWEET CORN

Definitions Describing The Reaction Of Plants To Pests, Pathogens, And Abiotic Stresses (as defined by the International Seed Foundation)

The following definitions are meant to clarify the level or degree to which plants are able to respond to or protect themselves against insect, bacterial, fungal, viral, or other pests in the environment:

Immunity: Not subject to attack or infection by a specified pest or pathogen. *No claims of true immunity are made on any variety sold in this catalog.*

Resistance: The ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure.

Two levels of resistance are used in this catalog:
High resistance (HR) or Resistance (R) *(specified as per vendor preference)*: Plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
Intermediate resistance (IR): Plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Moderately resistant plant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.

Tolerance: The ability of a plant variety to endure *abiotic stress* without serious consequences for growth, appearance, and yield.

Susceptibility: The inability of a plant variety to restrict the growth and development of a specified pest or pathogen.

SEEDWAY VEGETABLE

Supersweet or SH_2 Hybrids contain the shrunken gene (sh2) and have higher sugar content than Su and Se genotypes. The SH2 gene greatly blocks the conversion of sugar to starch; thereby allowing supersweet hybrids to hold their sweetness much longer than Su or Se types. As a result, supersweets are ideally suited to 3 to 5 day long distance shipping. Supersweet hybrids have greatly improved in the last couple of years. You will notice increased tenderness, higher sugars and better eating quality. Several names are being used in the industry to denote high quality supersweets, i.e. Augmented, Xtra Tender, Gourmet Sweet, Multi-Sweet.

Growing Tips: Supersweet hybrids generally require warm soil (60 degrees or higher) for optimum germination. Supersweets should be isolated from Su, Se, and field corn varieties to ensure sweetness, tenderness, and flavor. Distances of about 50', plus the use of border rows, and varieties with at least an 8 day difference in maturity keep contamination to a minimum.

What is the sh2i gene? The sh2i gene is a naturally occurring gene discovered by the University of Florida. It is not genetically modified. The sh2i gene gives you the same eating quality as a normal sh2/supersweet. The sh2i gene when put in the proper genetic background does not affect the eating quality or shelf life.
What is the benefit? The sh2i gene promotes a larger, denser kernel. A hardier kernel translates to hardier seed that provides better seedling vigor and uniformity.
SEEDWAY carries 3 SH2i hybrids: Xanadu (NEW) (bicolor sh2), Solstice (bicolor sh2), and Eden RMN (NEW) (white sh2)

The Nirvana Series
Elevate Your Sweet Corn Experience

The Nirvana Series will Elevate your customer generation and loyalty. We carry Xanadu (Bicolor) and Eden RMN (white) from the Nirvana Series. They have a unique taste and texture with elevated seedling vigor and eating quality.

Both Xanadu (page 32) and Eden RMN (page 34) are 75 days and produce 8" ears. Try them this year, you'll be happy that you did!

Our standard sweet corn seed treatment now includes Cruiser insecticide. Cruiser seed treatments help to reduce Stewart's Wilt infection transmitted by flea beetles. Additional benefits are reduction of wire worms, seed corn maggots and other secondary pests.

SWEET CORN — BICOLOR Se

Listed By Maturity - See Pricing On Page 40

Sugary Enhanced Hybrids contain the sugary enhancer (se) gene, significantly raising the sugar content above standard su's while retaining the tenderness and creamy texture of standard varieties. High initial sugar allows them to hold sweetness longer and are best suited for local or one day shipments. Se hybrids have been greatly improved in the last couple of years to increase sweetness, corn flavor, and offer improved eating quality. Several names are being used in the industry to designate these improved se hybrids, ie Synergistic, TripleSweet, TripleSweet Plus, Quad Sweets. **Growing tips:** No isolation from standard su's is necessary. **Synergistic hybrids** are homozygous for either the su or sh2 gene and heterozygous for the other. Synergistics are utilized primarily to increase sugar levels in the su/se types while maintaining the tender pericarp and creamy texture that make se's desirable. Seed quality is not generally affected and will be similar to hybrids within the class they are compatible with. **Growing tips:** All synergistic hybrids that we presently carry are su/se compatible and can be planted with su/se hybrids, but need to be isolated from sh2 types.

SWEET CORN PERFORMANCE SERIES™

Performance Series™ corn varieties aid in weed and insect control. Insect protection covers both above-ground and below-ground pests. Performance Series™ does not control cutworm, aphids, flea beetles or western bean cutworm. Fields need to be scouted for these pests to prevent economic loss. Performance corns are an IPM tool. Not a cure all.

- European Corn Borer
- Sugarcane Borer
- Common Stalk Borer
- Northern Corn Rootworm Larvae

CORN — ORNAMENTAL *Listed By Maturity*

Code	Variety	Days	Comments
5350NT	**EARTH TONES** (hybrid)	90	This early dent flour corn variety has an ear 8 - 10" in length. The remarkable trait of this dent corn lies in the beautiful muted colors in the ear. The kernels of the corn are NOT the shiny, deep intense colors found in Indian Corn. The ears contain many of the soft colors found in nature near harvest time. The beautiful ears can be used for fall decorations, ground into flour, or used as feed for birds and other animals. (1,500 seeds per pound)
8465	**FIESTA** (hybrid)	95	Early maturity hybrid; shorter, stouter plants are less susceptible to wind damage. Ears are 7 - 10" in length with 20% - 30% purple husks. Colors of yellow, red, white, blue, purple and variegated kernels. (1,700 seeds per pound)
5328	**HOCUS POCUS** (hybrid) SEEDWAY EXCLUSIVE	100	This orange/black hybrid is great for Halloween or anytime in the fall. It produces a sturdy 7.5' plant and 8" ears. The husk and cob have a reddish tint when mature. Clean single stalk, great for bunching. (1,800 seeds per pound)
5349NT	**RAINBOW MINI INDIAN CORN**	100	Ears are 3 - 6" long. Nice percentage of red husks in this blend. Wide variety of kernel colors on the ear, including many pastels. Stalks are 6-8' tall and stand well. Harvest when husks are dried. (5,000 seeds per pound)
9215	**AUTUMN EXPLOSION** (hybrid) SEEDWAY EXCLUSIVE	102	Hybrid flint with improved lodging resistance. 8 - 9" ears have varied combinations of red, white, pink, yellow, purple and variegated kernels. Approximately 25% red husks. (1,500 seeds per pound)
9574NT	**BROOM CORN MIXED COLORS**	105	Heads/plants look much like sorghum; heads traditionally used for brooms. Colors include gold, deep brown, rusted wheat and white. Attractive for dry arrangements, crafts and brooms. (16,000 - 20,000 seeds per pound)
5347NT	**SHADES OF BLUE INDIAN CORN**	105	Ears are 3 ½ - 5 ½" long. Several blends of blue shades including sky blue and violet blue. Harvest when husks are dried. (5,000 seeds per pound)

*Different seed lots and different growing seasons will affect seed size and seeds per pound. The numbers listed here are estimates based on our history with these varieties.

Code	Variety	Days	Fruit Shape/Type	Fruit Color	Comments
7933	**A1014** Estelal SEEDWAY EXCLUSIVE	55	Medium-sized, smooth teardrop	Purple/black	A1014 brings an entirely new level of quality, earliness and yield to the "American" style of eggplant. It is up to 10 days earlier than any other variety and will provide a lot of fruit early. The fruit has a refined look, is firm and glossy, and a "just right" size for most grocery stores. The calyx are totally spineless and won't scratch the fruit, your customers or harvest crew. Fruit separates easily from the plant with a gentle tug. The plant is compact but stays healthy and productive for a full season. Most growers will not need to stake A1014 and plants can be crowded.
9581	**MEGAL**	60	Long, tapered	Purple/black	Green calyx, long Italian type, 7" - 9" long, 3" diameter. Moderate resistance to TMV.
8764NT	**DAIRYU**	60	Med-long, slender, Japanese	Purple/black & glossy	Not only is this traditional Japanese eggplant early, but it will produce for a long season. Very reliable! Harvest 7” - 10” long.
6817NT	**SLIM PURPLE**	61	Long, slender, Chinese	Light purple	Long, slim fruit grows from 8” - 12” long and stays perfectly cylindrical. The calyx is a matching light purple with green shading. Tender.
8034NT	**FAIRY TALE**	61	Medium-sized, smooth teardrop	Violet with white streaks	Fairy Tale is a favorite for plant sales since the compact, strong plant can be grown in containers. The slender striped fruit is borne in clusters and makes loads of fruit. **GR:SE**
6373	**NADIA**	62	Teardrop	Black	Heavy early set, large fruits held high. Sets when cool.

The small cap is spineless and fruit is easy to pick.
6531 NT	**LUCILLA** Zebra Stripe	63	Smooth teardrop	Purple/ black & glossy	Our favorite feature of Lucilla is a small, spineless cap, along with the super glossy skin that is darker than Nubia with bright white stripes. Yields are excellent. Fruit can get quite large and still hold quality.
5497 NT	**NUBIA** Zebra Stripe	64	Medium-size, smooth teardrop	Wine & cream streaks	Beautiful striped, glossy and firm fruit will dress up your eggplant offerings! Dark wine streaks overlay a cream background.
8118	**SANTANA** SEEDWAY EXCLUSIVE	65	Extra large, teardrop	Purple/ black	Versatile in size, Santana can get quite large and hold quality. A healthy plant supports high yields over a long season. The fruit stem and calyx are nearly spineless. Sets freely in adverse conditions.

7962	**Basil ELIDIA** Genovese type	Genovese type with ***intermediate resistance to Fusarium***. Growth is semi compact but it is high yielding (just shorter internodes). Leaves are shiny and dark green. Slow to bolt.
4517NT	**Basil RUTGERS DEVOTION DMR** Genovese type	This is a fast growing Genovese-type basil for potted, greenhouse, and field production. With strong Downy Mildew resistance, the medium-sized and medium-green leaves are flat to slightly cupped with ridges. The bushy plants have somewhat short internodes.
5043	**Basil EMILY** Plant sale type	Bred especially for live-plant sales. Emily comes up fast, smells heavenly, and has short internodes to facilitate packaging and shipping. It also does well in the field, being quite productive in leaves (only with shorter stems).
5498NT	**Basil TUSCAN** Lettuce leaf type	A supersize lettuce leaf basil is a darker green color than other strains with a nice clean flavor.
4768OR	**Basil PROSPERA**	This new variety has a vigorous, upright habit with medium sized leaves. It has a high resistance to Downy Mildew and some resistance to Fusarium
6829	**Cilantro CRUISER**	Cruiser is a bolt-resistant variety that has a more uniform and fancier appearance as compared to Calypso. Even length stems make it very nice to bunch.
8335	**Cilantro SANTO**	Reliable quality.
4450	NEW **Chervil MASSA**	Massa is a uniform selection of a smooth leaf chervil. It is used for soups and salads.
5045	**Chives STARO**	Fast growing with thick, blue-green leaves. Staro's early vigor makes it excellent for live-plant sales. Staro can be grown over winter in greenhouses and for typical open field production. PERENNIAL.
8283	**Dill BOUQUET**	Bouquet is mostly used for seed heads - if you want a lot of the ferny green, Green Sleeves is a better choice.
8519	**Dill DUKAT**	Early with heavy foliage and large umbels. Anthocyanin free (non-purple).
7938	**Dill ELLA** Plant sale type	Ella is the perfect dill for selling live plants. It is slow bolting and makes lots of ferny, dark green stems. It is also good for anyone choosing to sell greens only and not needing flowers.
5022	**Dill GREEN SLEEVES**	Your best choice for greens (bunches) since it is very vigorous and also very slow to make a seed head. It does, however, make a nice large seed head to sell bunched for during pickle season.
6414	**Fennel ORION** Bulbing type	80 days from seed, but can be transplanted. Orion forms uniform round bottoms that hold well after bulbing. This is a semi-long day Florence type. In Pennsylvania, we reliably grow good bulbs in spring and fall. Further North it should be seeded mid-June or later. Fennel is very cold tolerant and has little need to be grown in a tunnel, but if it is, it will stay perfectly clean.
4469NT	**Fennel DRAGON** Bulbing type	75 days from seed. Dragon features medium fast growth, makes a round bulb and is very slow to bolt. Like Orion, it can be grown in a wide range of conditions and seasons, including spring. It will get large without splitting.

KALE SPECIALTY and OPEN POLLINATED

Code	Variety	Comments
8531	**BLUE SCOTCH aka VATES**	This is the original curly leaf kale with stems radiating from a central stalk. If you are cutting smaller leaves or not stripping, this is a nice standard kale. It will not regrow well like hybrid kale.
7151	**LACINATO KALE** *Dinosaur/ Tuscan Kale, Cavolo Nero*	Also known as dinosaur kale for its dark and primitive look, Lacinato is an Italian kale with a rich, mild flavor and tender texture. It is feather shaped and usually picked at 10" or smaller. We offer three types and this is the "generic" version, priced for salad mix. Lacinato is one of the best varieties to grow in cold weather in a high tunnel.
6027NT	**BLACK MAGIC** *Lacinato selection*	Black Magic is a lacinato selection that is very uniform and erect and good for bunching.
8394NT	**BLACK JACK** *Lacinato selection*	With increased interest in Lacinato, this hybrid offer the fanciest appearance for bunching, with slender erect, and very savoyed nearly black leaves.
7765NT	**ETHIOPIAN/ HIGHLAND**	Kale salad is often just lacinato mixed with Ethiopian or Premier kale. Both are mustards but called kale. Ethiopian, also called Highland Kale, has small leaves with serrate margins and a delicious mustardy flavor.
8392	**RED RUSSIAN SELECT**	A very nice improvement over generic Red Russian, this strain has a finer cut to the leaf and shows a bit more color for more of the year. It is more vigorous than Red Russian and very slow bolting.
7058	**SIBERIAN DWARF**	12 - 14" tall plants with light blue-green leaves and ruffled margins. Cold tolerant and more tender than other kales. It has a good mustardy flavor and very vigorous.

PEAS INOCULANT

Code	Variety	Comments	Price
878100	**PEA & BEAN INOCULANT (Treats Up To 50 lbs.)**	Using an inoculant results in better plant and root system growth for legumes. Legume plants produce their own nitrogen through a relationship with bacteria called Rhizobia which is in the inoculant as well as in the soil, but, the Rhizobia in the soil are not as active in cool, wet soils. Adding the inoculant gives your legumes a jump start. (This is an all-natural product, but it is not organically certified).	$9.45

SWISS CHARD

See Pricing Below For Other Varieties

Code	Variety	Days	Days are to full size. For baby, most will be between 24 and 30 days.
5161	**BALI**	45	Glowing crimson red stems and broad veins are eye-catching in contrast to the green, glossy leaves. Vigorous.
7555	**FIRE FRESH**	25 - 35	This magenta-stemmed chard is bred (and priced) for baby-leaf use. Grown larger it is also good in braising mixes. Fire Fresh has a very clean look, with bright contrast between the magenta stems and medium green leaves. Growth is erect with even length stems for machine harvest. **HR:** Cb **IR**: Pfb(1)
5487	**CELEBRATION**	58	Multi-colored chard with exotic dark orange, crimson, burgundy, and gold colors with nicely savoyed leaves. A true genetic mix, you may get two colors from each seed pod. This translates to more even germination and growth between colors.
8108NT	**BRIGHT LIGHTS**	55	Alternative to Celebration, Bright Lights displays bright colors of gold, pink, orange, purple, red, and white. Bright Lights is a mix, so be careful when thinning to not favor only the most vigorous plants.
4260 NEW	**CHARSANO RZ**	55	This new green and white chard shows improved resistance against Cercospora Leaf Spot. It is fast growing and uniform.
9546	**SILVERADO**	60	Dark green, heavily savoyed leaves with broad, white stems. Compact for easy packing. Slow bolting.
7734NT	**ION**	30	Bred for salad or braising mixes, Ion has the qualities you look for to machine harvest; stout straight stems that stand erect. The leaf is a clean bright green. Stems and veins are cranberry colored. Tolerant to Cercospora and Downy Mildew.
7733	**BARESE**	30	Barese chard is an Italian heirloom, now used mostly for baby leaf and braising mixes where its milder flavor is appreciated. The leaves are a dark, waxy green and are held erect on stout, flat, bright white stems.

9377	**CHEROKEE PURPLE**	72	12 - 16 oz., oblate	Cherokee is one of the earliest large-fruited heirlooms to mature. The fruit is colored with a combination of purple, black, brown, red, and green both inside and out. Compact plant.
8423OR	**GREEN ZEBRA**	75	4 - 8 oz., oval to round	An easy heirloom to grow because the fruit is smaller and smoother than most. Dark green stripes on yellow-green background with a tangy flavor.
9635	**"RIVIERA" CUORE DI BUE**	75	4 - 6 oz., fig shape with deep pleats	From Italy, this is an improved strain of oxheart tomato. It is very flashy with deep lobes but a relatively small blossom scar. It is an exceptionally heavy yielder in high tunnels. There is very little gel, so Riviera is good for stuffed tomatoes or for sauce. In the tunnel you can expect few to no culls.
9375	**BRANDYWINE PINK**	78	1 lb. or more, oblate	Considered by many to set the standard for rich tomato flavor in heirloom tomatoes, Brandywine has an attractive "potato leaf" plant.
7893	**PINEAPPLE PREMIER**	80	12 oz. and up, oblate	Our strain of Pineapple has a wonderful citrus, fruity flavor and meaty texture. The flesh has large streaks of rose and lemon-yellow colors. It keeps producing a good deal longer than many heirlooms.

Bigdena is the exception in that it combines large fruit with a fancy greenhouse look. Mostly smooth with a small stem scar. The fruit is firm with very good flavor. In tunnels, it is a week later than the earliest varieties but is an overall heavy yielder.

SEEDWAY VEGETABLE

HELP RESTORE NUTRIENTS AND INCREASE YIELD POTENTIAL

COVER CROPS SINGLE TYPES

ANNUAL RYEGRASS

CENTURION diploid annual ryegrass was developed for quick establishment, excellent Crown Rust resistance, frost tolerance and high forage yield. CENTURION exhibits excellent seedling vigor, and medium maturity, allowing consistency in forage yield throughout the season with good transition back into warm-season forage grasses. **FRIA** is a late maturing, widely adapted annual ryegrass with excellent cold tolerance. Other benefits include improved disease resistance to Crown Rust, Gray Leaf Spot and Helminthosporium Leaf Spot.

HAIRY VETCH

Purple Bounty is a new winter hardy, early maturing hairy vetch variety developed for high nitrogen fixation (up to ½ of a subsequent crop's nitrogen), increased biomass for a thicker mulch and earlier flowering for more flexibility in planting succeeding crops. Vetch forms ground cover slowly in the fall, but root development continues through the winter with substantial growth in the spring. For maximum results, Purple Bounty should be in full bloom to allow for peak nitrogen contribution and to mow, roll or spray for maximum vetch kill. Spring oats or winter grains can also be planted with Purple Bounty to act as a protective cover for improved winter survival and increased erosion control. Purple Bounty is an excellent cover crop for nitrogen fixation, erosion control, bio mass, and weed suppression.

PHACELIA

Phacelia is a plant that is native to the United States, but was adopted and improved by Europeans for use as a cover crop. Phacelia is quick to establish and will winter kill at 18° F. Phacelia is an excellent source of high quality nectar and pollen and as a result is excellent at increasing the population and diversity of beneficial insects. Phacelia will begin flowering 6-8 weeks after emergence and will continue to flower for 4-6 weeks. Phacelia is comparable to buckwheat in many ways, but is more tolerant to cold and drought. Phacelia can also be used for forage, as a green manure crop, nematode control, and a nitrogen trap crop.

OATS

Oats are very versatile as they can be planted at various times of the season and used as an excellent cover and forage crop. Oats work well alone, but especially well in mixes with radishes, turnips, berseem clover, crimson clover and Austrian winter peas. Oats perform well for erosion control and are very good nutrient scavengers. Oats (and mixes with radishes or turnips) work very well for manure nutrient management.

TRITICALE

Triticale is a hybrid small grain produced by crossing wheat with rye. The name "triticale" is derived from the combined scientific names of the two crop species wheat and rye. The versatility that triticale offers as a grain, a forage, for straw and as a cover crop adds to the economic viability that sustains the interest in the crop.

BUCKWHEAT

Buckwheat, when used as a cover crop, can reduce both the emergence and growth of weeds, thereby presenting an easy and economical alternative to herbicides. Buckwheat, a short-duration broadleaved, annual species, provides very effective weed suppression due to its rapid early growth that establishes a canopy faster than many weeds.

CRIMSON CLOVER

Crimson Clover has erect stems, grows quickly and has larger seeds than the more commonly used red clover. Crimson Clover's primary advantages are rapid growth during cool weather, shade tolerance and good reseeding potential. Crimson Clover can be planted in early spring or fall for weed control. Because of its shade tolerance and reseeding potential, crimson clover is also effective as a living ground cover in orchards. Crimson Clover has been used effectively to suppress weeds when planted in the early fall following a short-season crop such as potatoes, snap beans, vegetables or following winter wheat. Planting with a grass such as oats , which is also fast-growing, gives additional weed control in these situations.

AUSTRIAN WINTER PEAS

Austrian Winter Peas are a cool-season, annual legume with good nitrogen-fixing capabilities. Austrian winter pea is a low-growing, viney legume and has been shown to fix over 200 lbs. of nitrogen per acre per year under good conditions. It has hollow, slender and succulent stems, 2 to 4 feet long. The foliage is pale green and the flowers are colored, usually purple, pink or reddish. The leaf consists of one to three pairs of leaflets and terminal branched tendrils. Pods are 1.5 to 2.5 inches long with three to five round, dark-colored seeds. Seed color is commonly gray with purple or brown mottles.

CEREAL RYE

Cereal Rye is a fall planted, winterhardy species with deep root penetration. The extensive root system enables cereal rye to capture high levels of nitrogen and other nutrients from the soil and reduces soil compaction issues. Cereal Rye has the added benefit of late fall and early spring grazing as well as spring silage or hay.

CALIENTE 199 Mustard Blend

Mustard blend used as a green manure crop and biofumigant. Produces excellent biomass with good management. Caliente 199 glucosinolate production among mustards in its class, and as part of and integrated program, can reduce nematode populations and suppress weeds and diseases including Verticillium Wilt, Silver Scurf, and Sclerotinia. Best results require good management including flail chopping, tillage and rotation. For the biofumigant to work, irrigation or light rain is needed directly after chopping and incorporating into the soil.

SUNN HEMP

Sunn Hemp is an excellent cover crop variety which produces large amounts of biomass through warmer conditions. Sunn Hemp will scavenge available nitrogen and will fix nitrogen when nitrogen is lost. Sunn Hemp will hold and produce sufficient nitrogen to provide nitrogen credit for the following crop.

To purchase these seeds (that do not ship free unless you are near a warehouse), you can order by phoning our Elizabethtown office at (800) 952-7333, or by phoning one of the SEEDWAY Sales Representatives.

Code	Variety	Days	Comments
6134NT	**AUTUMN BEAUTY**	44 - 54	6.5' – 8' foot plants are well branched with long branch stems. 6" Flowers are mostly rusty in color.
6130NT	**FLORISTAN**	46 - 55	A lovely and early flowering variety on a 3.5' to 4.5 foot branched plant. While flowers won't last long when cut, the stems are strong and the flowers a pretty dusty dark rose and cream color.
5946NT	**BLACK OIL SEED**	53-63	Makes a nice addition to sunflower mazes and also used for microgreens. Multibranched with flowers sized 4"-9". Gold flowers with brown center. Height 4 to 6 feet.
4159NT	**SUNRICH GOLD**	60 - 70	Early blooming and stunning with medium-large heads held upright on sturdy single stems. Golden Yellow with a yellow center. Pollenless flowers have great shelf life (and bloom a long time in the field). Grows 4.5 to 5.5 feet.
5421NT	**SUNBRIGHT SUPREME**	64 - 70	Sunbright Supreme is a proven variety for single stem cut flowers. The flowers are quite uniform in maturity and size.
4421NT	**FULL SUN IMPROVED**	65 - 70	Full Sun is used for cut flowers in cooler weather in the South, where it matures predictably with low light. Pollenless. 47" to 78" tall. When grown in winter, stems are shorter but always long enough for a perfect, pollenless flower.
4158OR	**GOLDY DOUBLE**	75 - 80	Goldy Double produces fully double "powder puff" flowers on "spray" type branched stems. It makes some of the nicest cut flowers of any branched variety in that the stems are long, strong and straight. The medium-tall plant, 6' to 7', is topped with an explosive jolt of gold in full bloom. Nearly pollenless flower start blooming with a greenish center.
6646NT	**TEDDY BEAR**	75 - 80	Fantastic for potted plant sales or as a border, Teddy Bear has shaggy golden flowers on compact, 3' to 4' plants with dense large leaves. Despite the small size, it is late maturing at 75 – 80 days.

WILDFLOWER MIX

Great For Pollinators! See Pricing At Right

Code	Variety	Comments
8471NT	**WILDFLOWER BEE POLLINATOR MIXTURE**	Wildflower Bee Pollinator Mix is exclusively formulated to provide food and shelter for bees and other beneficial pollinators. Colony collapse disorder is threatening the bee population that we depend on to pollinate crops. One of the contributing causes to this serious problem is the reduction of available native plants that bees depend on for nectar and cover. Expect 3 to 4 years of blooms, after which weed competition may require additional sowing. Seeding Rate: 1 lb./2000 square feet.

Our seed, unless specified by the customer, will be treated with our standard seed treatment. Our standard treatment can be one or multiple fungicides depending on the variety; some treatments have insecticides included with fungicides for added protection. Encrustments, pelleting and priming treatments are also available in addition to the standard treatment options. Although SEEDWAY will not guarantee in stock inventory of a variety with a specific seed treatment, treatment & pelleting can often be arranged if adequate lead time is allowed prior to delivery. Minimum order amounts will apply.

Pelleting - A coating on the seed to help increase seed size for mechanical planting. With uniform seed shape and size, planting placement is greatly improved. Within the pelleting material, seed treatments such as insecticides and/or fungicides are often added for protection against pathogens.
Encrustments - A coating that minimally increases seed size & makes irregular or disfigured seed uniform. This helps to aid with mechanical seed sowing. There is no seed treatment added to the encrustment material.
Filmcoating - A thin polymer that binds treatment to the seed; this helps reduce the removal of treatment while the seed is being handled. Filmcoat is standard on most seed. The treatment is usually a bright color that also helps to see the seed after it has been sown.

Farmore - Name brand given to a group of seed treatments that provide either fungicidal or a combination of fungicidal and insecticidal properties. Farmore treatment packages are listed below.

Farmore F300 - A fungicide seed treatment added to vegetable crops such as carrots, lettuce, melons, onions, peppers, tomatoes & squash. Protects against the following: *Alternaria, Aspergillus, Botrytis sp., Damping-off, Fusarium, Penicillium, Pythium, Rhizoctonia, Sclerotinia.*

Farmore FI400 - A combination fungicide & insecticide seed treatment applied to vegetable crops such as cucumber, pumpkin and squash, among others.

Farmore FI500 - A combination fungicide and insecticide seed treatment used specifically on onion seed. Trigard - Insecticide that controls onion maggots. This is added during the pelleting & encrustment process in onions.

Pro-Gro - Combination of Carboxin and Thiram added to pelleted onions to control onion smut.

Cruiser/Poncho - Systemic insecticides used on beans and corn to prevent injury from flea beetles & soil insects such as wire worms, seed corn maggots, white grubs.

Priming - A technique used to jump start the germination process. This reduces the time it takes seed to germinate & also increases plant uniformity. Priming can be used on cabbage, carrots, leeks, onions, parsnips & watermelons.
