EMERALD JEWEL

110 Day

KEY CHARACTERISTICS

- Emerald Jewel is a small beaded, smooth headed, clean stemmed, multi-use variety that is especially suited for crown cut. This is a beautiful variety; however, the maturity can be quite late during cold growing conditions. We suggest harvesting in the transition slots in coastal CA and during the tail end in the Desert Southwest. Emerald Jewel has intermediate resistance to some races of clubroot.

Relative Maturity	Plant	Head Traits	Color
110 Days	Tall	Domed Dense	Green
