TEST COMMENTS: *Soil conditions at planting were very wet. Seed furrows did not close back until June. Rainfall the evening after planting did allow for good emergence. Rainfall totals were OK, but with the excessive heat, corn was under some stress during the season. Root worm adults did some silk clipping but pollination was good. Some hybrids did have tip fill problems. Disease was present with gray leaf spot and anthracnose the main ones. Overall rating of the plot is a 7 out of 10.(10=best)*
