# PVH 2310

An early maturing variety and can be harvested much earlier (10 days earlier) than varieties like K 326. This variety was bred to help utilize barn space and is recommended to be bud topped. It has a well- developed root system and leaf spacing ideal for mechanical harvesters. PVH 2310 is best for fields that would also be planted in K 326. It is important to remember that this variety has the potential to ripen much faster than what farmers are accustomed to.

TOBACCO MOSAIC VIRUS	RESISTANT
POTATO VIRUS Y	RESISTANT
BLACK SHANK RACE 0	LOW RESISTANCE
BLACK SHANK RACE 1	SUSCEPTIBLE
ROOT-KNOT NEMATODE	RESISTANT

AVERAGE DAYS TO HARVEST FROM TRANSPLANT

**Recommended For:**  
**TMV RESISTANCE, EARLY MATURITY, DISEASE FREE FIELDS**

**EARLY VARIETY!**

FRED WETHERINGTON - PVH 2310

PVH 2310

# PVH 1600

This normal cycle hybrid is known for its cured leaf of excellent quality, high productivity, adaptability and good holding ability in the field. PVH 1600 has high tolerance to bacterial wilt and moderate tolerance to Black Shank Race (1). Furthermore, it is resistant to Globodera nematodes and Root-Knot Nematodes Meloidogyne incognita, races 1 and 3, and to Black Shank Race (0).

AVERAGE DAYS TO HARVEST FROM TRANSPLANT					130 Days

**Recommended For: BLACK SHANK RESISTANCE RACE 1, PH GENE, \* GRANVILLE WILT**

*\* These recommendations are based on levels of tolerance rather than resistance. Do not expect total resistance in your field.*

RANDY EDWARDS - PVH 1600

BAXLEY, GA - NC71

# NC 71

A high yielding hybrid with high resistance to Black Shank Race (0), low tolerance of Granville Wilt, and tolerance to races 1 and 3 of the Southern Root-Knot Nematode. It is consistently high yielding in field trials year after year. Growth patterns are similar to K 326.

AVERAGE DAYS TO HARVEST FROM TRANSPLANT					135 Days

**Recommended For: PH GENE**

## K 326

Well known for its quality and excellent curability. It is tolerant to races 1 and 3 of Southern Root-Knot Nematode and Brown Spot. K 326 grades well and is easy to cure and manage.

**Recommended For: DISEASE FREE FIELDS**

## NC 925

A North Carolina State University cultivar with reasonable high yielding capability in combination with Black Shank resistance. This variety is a great option for growers that have a strong need for highly-resistant Black Shank varieties without losing the yielding ability. NC 925 has substantially higher yielding potential than K 346.

**Recommended For: BLACK SHANK RESISTANCE RACE 1**

## NC 1226

Developed by Dr. Ramsey Lewis at N.C. State University, this new hybrid is considered to have a superior level of blank shank resistance providing near immunity to race 0 (similar to NC 71) and high resistance to race 1. It also possesses low-intermediate levels of resistance to Granville wilt. In addition, NC 1226 is resistant to races 1 and 3 of the root knot nematode *Meloidogyne incognita*, being susceptible to tobacco mosaic virus and potyviruses. NC 1226 is a great option for growers that have a strong need for highly-resistant Black Shank varieties.

TOBACCO MOSAIC VIRUS	SUSCEPTIBLE

**NEW VARIETY !  
LIMITED AVAILABILITY!**

## K 346

An established variety that performs well. K 346 has resistance to Black Shank and tolerance to Granville Wilt. It is also tolerant to races 1 and 3 of the Southern Root-Knot Nematode.

TOBACCO MOSAIC VIRUS	SUSCEPTIBLE
POTATO VIRUS Y	SUSCEPTIBLE
BLACK SHANK RACE 0	HIGH RESISTANCE
BLACK SHANK RACE 1	MODERATE RESISTANCE
ROOT-KNOT NEMATODE	RESISTANT
GRANVILLE WILT	MODERATE RESISTANCE
ROOT SYSTEM	POOR
HOLDING ABILITY	FAIR
TOBACCO CYST NEMATODE	SUSCEPTIBLE
CURABILITY	FAIR

**Recommended For: BLACK SHANK RESISTANCE RACE 1**

## NC 72

A high yielding, high quality hybrid with high resistance to Black Shank Race (0), moderate tolerance to Granville Wilt, and tolerance to races 1 and 3 of the southern Root-Knot Nematode. It is a little later flowering than K 326. NC 72 is easy to cure and ripens similar to K 326. NC 72 is ideal for mechanical harvesters. Leaves are mostly medium bodied lemon and orange.

TOBACCO MOSAIC VIRUS	SUSCEPTIBLE
POTATO VIRUS Y	SUSCEPTIBLE
BLACK SHANK RACE 0	HIGH RESISTANCE
BLACK SHANK RACE 1	LOW RESISTANCE
ROOT-KNOT NEMATODE	RESISTANT
GRANVILLE WILT	MODERATE RESISTANCE

HOLDING ABILITY	GOOD
TOBACCO CYST NEMATODE	RESISTANT
CURABILITY	EXCELLENT

**Recommended For: PH GENE**

## PVH 1452

A potentially high yielding, high quality hybrid with resistance to Black Shank Race (0) and a high tolerance of Granville Wilt. This variety also has moderate resistance to Black Shank Race (1) and is tolerant to Southern Root-Knot Nematode.

AVERAGE DAYS TO HARVEST FROM TRANSPLANT				140 Days

\* These recommendations are based on levels of tolerance rather than resistance. Do not expect total resistance in your field.

### Recommended For:

**BLACK SHANK RESISTANCE RACE 1, PH GENE, GRANVILLE WILT**

## PVH 2254

This hybrid has the potential to be high yielding, excellent quality tobacco. PVH 2254 has high rusticity and adaptability to different types of soil and climate. It is resistant to TMV, Root- Knot Nematode *Meloidogyne incognita* races 1 and 3, and has high tolerance to Bacterial Wilt. PVH 2254 also has excellent holding ability in the field; it cures easily and tends to produce more leaves compared to traditional cultivators like K 326. To obtain the best results in terms of yield and quality, the plants should be topped with a maximum of 24 leaves.

### Recommended For: \*GRANVILLE WILT, TMV RESISTANCE, LATE MATURITY, DISEASE FREE FIELDS

\* These recommendations are based on levels of tolerance rather than resistance. Do not expect total resistance in your field.

# PVH 2343

Excellent quality of cured leaves and high yield potential are the main characteristics of PVH 2343. It is resistant to TMV, Nematodes *Meloidogyne Incognita* races 1 and 3, and it has a high to moderate level of tolerance to Bacterial Wilt. PVH 2343 has a good number of leaves per plant, excellent holding ability in the field, and is easy to cure. It also stands out for its rusticity and adaptability to different types of soil and climate.

**Recommended For: MEDIUM RESISTANCE TO BLACK SHANK AND BACTERIAL WILT**

*\* These recommendations are based on levels of tolerance rather than resistance. Do not expect total resistance in your field.*

DELEON BASS; CLINTON, NC - PVH 2343

PVH 2110

# PVH 2110

A hybrid with moderate resistant to Bacterial Wilt and Southern Root-Knot Nematode. It has a high yield potential and very good curing characteristics. This variety is a great alternative for growers satisfied with K 326 but seeking potentially higher yields and a bit more of a disease package.

AVERAGE DAYS TO HARVEST FROM TRANSPLANT
