Trecepta®RIB Complete

These high-performance genetics demonstrate the advantage of Trecepta® technology in controlling Western Bean Cutworm and Corn Earworm. Impressive yields of grain that start with fast drydown and finish with surprising test weight. The lower ear placement on the stalk supports superior plant standability right through harvest. A more determinant ear shines with a good plant population on the better acre to attain the highest yields. The robust plant with wide leaves and dark green color produces energy-rich forage with a lot of starch. Only available in a Trecepta® RIB Complete® technology trait package without Corn Rootworm protection.
