Code	Variety	Days	Head Traits	Color	Market Season	Comments
3901	JET DOME	54	Semi-dome	Dark green	Spring, summer, fall	Extra early maturing. Upright plant with dark green, fine-dome shaped, smooth head. Tolerant strongly to heat. Suitable for spring, summer and autumn production, especially for summer harvesting. Holds well for extra-early maturity class.
7892	ASTEROID	59	Medium dome, small beads	Deep green	Spring, fall	With excellent uniformity and good heat tolerance, Asteroid is widely adapted for both spring and summer seeding. It is an excellent choice for bunching.
7681	EASTERN CROWN	59	Medium-high, smooth dome	Blue green	Widely adapted	This heat tolerant, early maturing variety holds in the field extremely well and will keep its nice dark green color in hot weather. Eastern Crown is the best choice for those wanting to combine heat tolerance with wide adaptability.
4532	ABRAMS	60	Medium dome, smooth	Green	Cool to warm	While most new broccoli varieties have their heads deep in the plant, Abrams' head sits above a tall and vigorous plant. Couple that with excellent uniformity and your harvest crew will cut Abrams faster and easier than most other varieties. It is a very good choice for bunching and can also be used for crown cut. It has moderate heat tolerance and is one of the best varieties to plant early in a cool to warm slot.
5232	EMERALD CROWN	61	High smooth dome, med-small beads	Blue green	Widely adapted	Produces a uniform, solid and heavy head for crown cut. Heads resist purpling in cooler weather. Emerald Crown handles warmer weather well, allowing for later spring harvest and summer seeding for late summer harvest. Handles weather extremes.
6330	GREEN MAGIC	62	Domed, mostly smooth, med-fine beads	Green	Spring, fall	Widely adapted and dependable, fancy quality heads. Sturdy and heavy. Good uniformity and holding ability.
7772	EASTERN MAGIC	68	High dome, medium-small beads	Blue green		Featuring very good heat tolerance and excellent field holding, Eastern Magic makes dark green, very high and dense dome heads.
8237	IMPERIAL	71	Medium dome, small beads	Dark green	Spring, summer, fall	Imperial produces large, fancy quality in warm weather and is good for spring, summer and early fall crops (and winter in the South). If you think your conditions are too warm to grow broccoli, give Imperial a try. Best for crown cut. Imperial maturity may be affected by heat/day-length.

BELLA VERDE^

Code	Variety	Days	Head Traits	Color	Market Season	Comments
7923	MILLENNIUM	74	High dome, small tight beads	Deep green	Spring, fall	Millennium resembles Emerald Crown but is later maturing with a heavier head. It holds longer in the field than other varieties. Anyone who grows broccoli should give Millennium a try both spring and fall harvest slots.
7809	EMERALD STAR	75	Tight dome, fine beads	Blue green	Warm, Hot to cool	Maturing a few days after Imperial, Emerald Star brings a new level of heat to a later maturing slot. Field holding is excellent. The plant is vigorous and tall. It is used mostly for crown cut. Heads are dense and heavy.
5114	AVENGER	80	Smooth dome, fine beads	Blue green	Fall, late fall	Avenger is for mid to late fall harvest in cool to cold weather. Heads are large with a dense, high, smooth dome. Avenger matures mid-season in early fall plantings, and very late in mid to late fall plantings.
3799	FORTRESS	83	Medium head, smooth dome	Green	Fall, late fall	Fortress is a new variety noted for its plant health and vigor. Head is held high in the plant and has resistance to Alternaria.
4424NT	JACARANDA	57	Smooth, shallow dome	Deep purple/blue green	Late Spring, Fall	Perfect for the specialty market, Jacaranda makes a unique, purple head with early maturity. Easy to grow, although we recommend avoiding the first crops in early spring.
4471NT	BURGUNDY	58	Florets with fine beads	Burgundy/purple	Widely adapted	This striking purple shoot-type broccoli is easy to grow, and can be planted in most slots. Snap out, and sell, the first shoots from the center of the plant and it will quickly produce side shoots. The shoot stems and florettes are sweet and tender. Color is best when raw or quickly steamed.
4470	MONTABELLO	62	Separate florets	Green	Widely adapted	For those wanting to grow separate shoots of broccoli, Montebello is the most reliable variety we have seen. Break out the initial head (which is salable) and you will get many shoots growing right back. Long, green stems have tight cluster of beads to make a small floret. Very sweet.
4049	BELLA VERDE (BR-752)	70	Separate thin stems, tight buds	Green	Widely adapted	BR-752 is a new "sweet stem" or stick broccoli. It is grown like regular broccoli, but separate stems are harvested to be packaged as a bunch. BR-752 is slightly earlier, and sometimes with a tighter bead than the standard sweet stem varieties. It is good in spring but better going from warm to cool. Each plant will have around 10-15 side shoots and should be harvested when the head is about 1 inch (2-3 cm) diameter. If it is bigger than 1 inch, the buds will start flowering (so harvest promptly). Growers should experiment with pinching out the center shoot.

Code	Variety	Comments
5366NT	SPRING RAPINI	52 days. Nice balance between vigor and slow bolting, this classic is an all around nice broccoli raab.
4087NT	RAPINI GRANDE	From the Puglia region of Italy comes a special strain of rapini known as Leccese (from the town Lecce) that has extra large heads in addition to voluminous glossy green leaves. We offer this seed from Italy and call it "Rapini Grande" for fall crops, when the maturity will be around 90 days from seed. (Early Rapini is better for spring.) For those unfamiliar with Rapini, or broccoli raab, it is really grown for the leaf, not the head, and is sold bunched before the flower buds open on the heads, cut with as many leaves as possible.

GREEN FRESH MARKET HYBRIDS

Code	Variety	Days	Head Type	Head Size/Weight	Plant Size/Color	Disease/Abiotic Reaction	Comments
3707 NT	 <b>VERVE SPRING GREENS</b>	60		2 lbs.			Verve looks like a collard green but is tender and sweet. The traditional “Spring Greens” from England. Verve is an improved hybrid and can be grown nearly year-round with exceptional holding both in the field and in storage. Grown like a point head cabbage, it can be sold sleeved, like romaine lettuce. It cooks in a flash. If blanched, the outer leaves can be used as wraps.
8399	<b>FARAO</b>	63	Round	2 - 3 lbs.	Dark green	<b>AB:</b> TB	This very early variety makes dense, sturdy heads that hold up well in the field. Very good uniformity of head size and maturity. Can be crowded.
5602	<b>CARAFLEX pointed head</b>	68	Pointed head	1½ - 3 lbs., 10” - 13”	Medium frame, dark green		Caraflex, if crowded to an 8” row spacing, will make a smaller, slender head that resembles romaine lettuce. It increases in girth with wider spacing. This type has excellent flavor and is a traditional first green of spring in many parts of Europe. It stores for up to 10 weeks.
9386	<b>ARTOST</b>	68	Round, short core	3 - 6 lbs., 14 - 20 count, 7”	Medium frame, medium green	<b>HR:</b> Foc <b>AB:</b> TB	Uniform with excellent density and holding ability. Good yields; cut early for a boxed cabbage or later for slaw. Adapted to most growing regions of the US and Canada.
4473	<b>CONQUEROR</b>	70	Round, short core	4 - 8 lbs., 7” - 10”	Medium-large, deep green	<b>HR:</b> Foc	If your customers want a large, early, round cabbage with very good flavor, look no further than Conqueror. It has a beautiful dark green appearance. Size will vary with spacing. It is slow to burst, especially for an early cabbage. For a smaller head, it can be crowded down to 8” spacing with no loss of uniformity.
3713	 <b>RESPECTA</b>	72	Flat	3½ - 4½ lbs., 8” - 10”	Large, medium green		Smaller and denser than Gunma. Attractive, smooth medium-green head. Quite clean and not prone to rot. Weighs 3.5 to 4.5 lb and is 8” to 10” across. Very good flavor, tender texture with even-thickness leaves. Suitable for early summer and short storage crops.
8989	<b>BRONCO</b>	80	Round, short core	3 - 6 lbs., 12 - 20 count, 6” - 7”	Medium frame, blue-green	<b>HR:</b> Foc <b>AB:</b> TB, TT	Very fancy heads are protected by waxy leaves. Bronco sets the standard for excellent yields and shipping quality. Bronco is your best choice if you need heads to stay small enough for boxing. The heads can get very dense without oversizing.
4210	<b>BELlicOSE</b>	81	Round	5 - 8 lbs., 7” - 9”	Large, dark green	<b>HR:</b> Foc <b>IR:</b> Xcc	Main season variety with dual purpose for fresh market boxing and slaw. A very upright variety with a vigorous growth habit and dense interior structure. High yields, excellent uniformity, and a strong root system. Try Bellicose in the Carolinas and north where its strong root system will help it stand up to the worst weather.
5336	<b>BOTRAN</b>	81	Round	3 - 8 lbs., 12 - 20 count, 6” - 8”	Medium-large, dark green	<b>HR:</b> Foc <b>IR:</b> Xcc	This fancy, dense cabbage has a unique appearance with a serrated edge to the leaves, but you will like it for its black rot resistance. Size can be controlled with spacing, although it should not be crowded. It will continue to gain size after it is mature (rather than splitting). From Northern Florida north, Botran has looked good in most slots where black rot resistance is needed.
9681	<b>GUNMA</b>	83	Flat	4 - 8 lbs., 6” x 12”	Large frame, green	<b>AB:</b> TT	Large diameter. Exaggerated, flat heads produce thin, crisp leaves with a mild flavor. Great for stuffing and salads! This type of cabbage is preferred by some Asian markets and is fabulous for making whole sour-head fermented cabbage. It is crisp and tender.
6866	<b>RAMADA</b>	83	Round, short core	4 - 6 lbs., 12 - 18 count, 7”	Medium-large frame, blue-green	<b>HR:</b> Foc <b>AB:</b> TB	Ramada is well-wrapped, dark, classy, and uniform. The dense heads stand upright on strong stems. It is widely adapted, used for fresh market boxing, and will store short term. Does very well in heat, including the Southeast.

HYBRIDS *Listed By Maturity - See Pricing On Page 32*

Code	Variety	Days	Head Description	Plant	Self Wrapping	Comments
8534	MINUTEMAN	53	6" - 7", Domed	Medium, vigorous	No	An early variety with good head density and weight. Good early performance and widely adapted for all but the hottest seasons.
3724 NT	TRI-C5063	62	5" - 6", Small, Uniform, Round	Small	Partial	This variety is unique in many ways. First is its reliability and uniformity throughout the growing year, due, in part, to very good heat resistance. The other unique feature is a small head size- perfect for roasting whole, small families and farmer market sales. It is very early maturing, and, while the plant is somewhat small, the head stays nice and white. Head size is 5 to 6 " across, and nearly round, although it may get larger in fall crops. The more compact plant allows for a higher plant population.
7643	FUJIYAMA	64	6" - 8", Domed	Med-large	Partial	Get a jump on summer cauliflower with this tropical type. Fujiyama needs heat to make a big plant, but in heat it will make a medium-sized, sweet tasting head. Maturity is outstandingly uniform. When slotted right, the plant gets nice and big, but should be tied for a truly white head. In South Central PA, we do not seed earlier than the 1st week in June for crops beginning mid-August.
5381	CLARIFY	66	7" - 8", Medium domed	Very large	Very Good	Early main-season variety that is heat tolerant and has the biggest plant in its maturity. It is one of the few varieties with Club Root resistance, but, even if that isn't a problem, Clarify is well worth trying.
5077	FREEDOM	67	6" - 7", Domed, dense	Medium	Partial	Spring-fall, vigorous, self blanching, high quality. Heat tolerant.
7599	AQUARIUS	69	6" - 8", Domed, dense	Large, vigorous	Good, excellent inner wrap	Aquarius offers a large leafy erect plant and very good uniformity. It is widely adapted, does well in warm weather, and can get large heads.

5335	ALCALA	69	5" - 7", High domed	Large	Excellent	Alcala has a tight and complete wrap when harvested at a smaller (12 count) size. Heads can get larger but will need to be tied. Heads are high, round, and dense. Good heat tolerance and widely adapted.
6690	FLAMENCO	71	7" - 9", Domed, dense	Med-large, erect, vigorous	Very Good	Dependable variety for fall production with an excellent wrap and fancy dense heads. Widely adapted, including the Southeast in winter. The outer frame leaves are long and erect for added shading from the sun.
4262	TWISTER	73	Medium-large, heavy headed	Large, leafy	Excellent	Twister is widely adapted both regionally and in planting date, working from spring through late fall and in winter in the South. Twister has a good heat tolerance coupled with a big vigorous plant and distinctive twisted leaves. The wrap is so good and large that you will likely not have to band it.
5391	TOLEDO	75	7", High domed	Extra large	Excellent	Toledo is a fantastic variety for maturing in cool weather. With a very large plant and complete inner wrap, Toledo has a pure white, heavy head and excellent uniformity in its maturity.
6367	ABSOLUTE	75	6" - 8", Domed, dense	Med-large, erect, vigorous	Very Good	Absolute features excellent uniformity and bright white color, even if the wrap pulls away from the head. In cooler areas, Absolute can be used in spring.
8340	AMAZING	75	7" - 8", Deep domed, dense	Large	Very Good	Vigorous plant. Wide wrappers provide good protection. Amazing is good if you don't want everything to mature at one time. It is best for harvesting during cool weather and not for spring.

4110	ORBIT	75	Early Romanesco type is attractive lime green and medium-domed. Produces uniform 1 lb. heads on average with dense curds, no leaves in the head, and an exceptional wrap from a large erect plant.
9244	VERONICA	77	7" - 8". Spiraled heads are uniform in size and maturity. Veronica has good heat tolerance and can be planted to mature in late summer through late fall. Romanesco has a very dense head with a mild and nutty flavor. It is grown like cauliflower.

Code	Variety	Days	Head Description	Plant	Comments
4348	CLEMENTINE	67	Medium, intense glowing orange	Medium	Clementine brings a whole new level of eye-popping color to your cauliflower mix. We do not yet know spring seeding performance, but for fall crops, Clementine will be about 4-5 days earlier than Flamestar. Compared to Flamestar, uniformity and field holding ability are similar (and excellent) but Clementine will weigh slightly less. We think both belong in your mix!
6368	CHEDDAR	67	6" - 7", Domed, orange	Small-medium	Appealing orange curd. Tastes great raw or cooked! Recommended for fall or early spring. Not heat tolerant but otherwise very easy to grow.
7899	DePURPLE	67	6" - 7", Medium dome, violet purple	Large	This stunning replacement for Graffiti produces larger, heavier heads at an earlier maturity. The floret stems are white and attractive when cut. It tastes good raw and holds its color when cooked. It shows sufficient heat tolerance to be used in a spring seeding. The plant is large and strong.
7642	FLAMESTAR	70	7" - 9", High domed, creamy orange	Med-large	This easy to grow, golden orange cauliflower makes a large, heavy head that is nearly problem free with great uniformity. Compared to Cheddar, the color may be lighter, but the weight and size is better.
4179 NT	VITAVERDE	72	Big, heavy green heads	Large	This high quality green cauliflower is not only early but adapted to most seasons including spring. The plant habit is upright and vigorous. In addition, the curd is heavy with excellent color.

**SWEET CORN** Definitions Describing The Reaction Of Plants To Pests, Pathogens, And Abiotic Stresses (as defined by the International Seed Foundation)

The following definitions are meant to clarify the level or degree to which plants are able to respond to or protect themselves against insect, bacterial, fungal, viral, or other pests in the environment:

**Immunity:** Not subject to attack or infection by a specified pest or pathogen. *No claims of true immunity are made on any variety sold in this catalog.*

**Resistance:** The ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure.

**Two levels of resistance are used in this catalog:**

**High resistance (HR) or Resistance (R) (specified as per vendor preference):** Plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.

**Intermediate resistance (IR):** Plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Moderately resistant plant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.

**Tolerance:** The ability of a plant variety to endure *abiotic stress* without serious consequences for growth, appearance, and yield.

**Susceptibility:** The inability of a plant variety to restrict the growth and development of a specified pest or pathogen.

**Supersweet or SH<sub>2</sub> Hybrids** contain the shrunken gene (sh2) and have higher sugar content than Su and Se genotypes. The SH<sub>2</sub> gene greatly blocks the conversion of sugar to starch; thereby allowing supersweet hybrids to hold their sweetness much longer than Su or Se types. As a result, supersweets are ideally suited to 3 to 5 day long distance shipping. Supersweet hybrids have greatly improved in the last couple of years. You will notice increased tenderness, higher sugars and better eating quality. Several names are being used in the industry to denote high quality supersweets, i.e. Augmented, Xtra Tender, Gourmet Sweet, Multi-Sweet.

**Growing Tips:** Supersweet hybrids generally require warm soil (60 degrees or higher) for optimum germination. Supersweets should be isolated from Su, Se, and field corn varieties to ensure sweetness, tenderness, and flavor. Distances of about 50', plus the use of border rows, and varieties with at least an 8 day difference in maturity keep contamination to a minimum.

**What is the sh2i gene?** The sh2i gene is a naturally occurring gene discovered by the University of Florida. It is not genetically modified. The sh2i gene gives you the same eating quality as a normal sh2/supersweet. The sh2i gene when put in the proper genetic background does not affect the eating quality or shelf life.

**What is the benefit?** The sh2i gene promotes a larger, denser kernel. A hardier kernel translates to hardier seed that provides better seedling vigor and uniformity.

**SEEDWAY carries 4 SH2i hybrids: Xanadu (bicolor sh2); Solstice (bicolor sh2); Eden RMN (white sh2); and Equinox (yellow sh2)**

## SWEET CORN

## BICOLOR Se Listed By Maturity - See Pricing On Page 42

**Sugary Enhanced Hybrids** contain the sugary enhancer (se) gene, significantly raising the sugar content above standard su's while retaining the tenderness and creamy texture of standard varieties. High initial sugar allows them to hold sweetness longer and are best suited for local or one day shipments. Se hybrids have been greatly improved in the last couple of years to increase sweetness, corn flavor, and offer improved eating quality. Several names are being used in the industry to designate these improved se hybrids, ie Synergistic, TripleSweet, TripleSweet Plus, Quad Sweets. **Growing tips:** No isolation from standard su's is necessary. **Synergistic hybrids** are homozygous for either the su or sh2 gene and heterozygous for the other. Synergistics are utilized primarily to increase sugar levels in the su/se types while maintaining the tender pericarp and creamy texture that make se's desirable. Seed quality is not generally affected and will be similar to hybrids within the class they are compatible with. **Growing tips:** All synergistic hybrids that we presently carry are su/se compatible and can be planted with su/se hybrids, but need to be isolated from sh2 types.

SWEET CORN PERFORMANCE SERIES™

Performance Series™ corn varieties aid in weed and insect control. Insect protection covers both above-ground and below-ground pests. Plus, Performance Series™ varieties are tolerant to RoundUp WeatherMAX® and Roundup PowerMAX®. Although Performance Series™ sweet corn varieties reduce the need for chemical insect control, they do not entirely replace IPM controls. Performance Series™ does not control cutworm, aphids, flea beetles or western bean cutworm. Fields need to be scouted for these pests to prevent economic loss. Performance corns are an IPM tool. Not a cure all.

- Fall Armyworm  
European Corn Borer  
Sugarcane Borer  
Common Stalk Borer  
Northern Corn Rootworm Larvae
- Corn Earworm

CORN ORNAMENTAL Listed By Maturity - See Pricing Below

Code	Variety	Days	Comments
5350NT	EARTH TONES (hybrid)	90	This early dent flour corn variety has an ear 8" - 10" in length. The remarkable trait of this dent corn lies in the beautiful muted colors in the ear. The kernels of the corn are NOT the shiny, deep intense colors found in Indian Corn. The ears contain many of the soft colors found in nature near harvest time. The beautiful ears can be used for fall decorations, ground into flour, or used as feed for birds and other animals. (1,500 seeds per pound)
8465	FIESTA (hybrid)	95	Early maturity hybrid; shorter, stouter plants are less susceptible to wind damage. Ears are 7" - 10" in length with 20% - 30% purple husks. Colors of yellow, red, white, blue, purple and variegated kernels. (1,700 seeds per pound)
5349NT	RAINBOW MINI INDIAN CORN	100	Ears are 3" - 6" long. Nice percentage of red husks in this blend. Wide variety of kernel colors on the ear, including many pastels. Stalks are 6' - 8' tall and stand well. Harvest when husks are dried. (5,000 seeds per pound)
9215	AUTUMN EXPLOSION (hybrid)	102	Hybrid flint with improved lodging resistance. 8"- 9" ears have varied combinations of red, white, pink, yellow, purple and variegated kernels. Approximately 25% red husks. (1,500 seeds per pound)
9574NT	BROOM CORN MIXED COLORS	105	Heads/plants look much like sorghum; heads traditionally used for brooms. Colors include gold, deep brown, rusted wheat and white. Attractive for dry arrangements, crafts and brooms. (16,000 - 20,000 seeds per pound)
5347NT	SHADES OF BLUE INDIAN CORN	105	Ears are 3 ½" - 5 ½" long. Several blends of blue shades including sky blue and violet blue. Harvest when husks are dried. (5,000 seeds per pound)

\*Different seed lots and different growing seasons will affect seed size and seeds per pound. The numbers listed here are estimates based on our history with these varieties.

Code	Variety	Days	Fruit Shape/Type	Fruit Color	Comments
7933NT	<div>A1014 Estelal</div> <div>SEEDWAY EXCLUSIVE</div> <div></div>	55	Medium-sized, smooth teardrop	Purple/black	A1014 brings an entirely new level of quality, earliness and yield to the "American" style of eggplant. It is up to 10 days earlier than any other variety and will provide a lot of fruit early. The fruit has a refined look, is firm and glossy, and a "just right" size for most grocery stores. The calyx are totally spineless and won't scratch the fruit, your customers or harvest crew. Fruit separates easily from the plant with a gentle tug. The plant is compact but stays healthy and productive for a full season. Most growers will not need to stake A1014 and plants can be crowded.
9581NT	MEGAL	60	Long, tapered	Purple/black	Green calyx, long Italian type, 7" - 9" long, 3" diameter. Moderate resistance to TMV.
8764NT	DAIRYU Japanese	60	Med-long, slender, Japanese	Purple/black & glossy	Not only is this traditional Japanese eggplant early, but it will produce for a long season. Very reliable! Harvest 7" - 10" long.
6817NT	SLIM PURPLE Asian	61	Long, slender, Chinese	Light purple	Long, slim fruit grows from 8" - 12" long and stays perfectly cylindrical. The calyx is a matching light purple with green shading. Tender.
6373NT	NADIA	62	Teardrop	Black	Heavy early set, large fruits held high. Sets when cool.
7686NT	LITTLE PRINCE Indian	63	Petite, egg-shaped Indian	Violet	The sturdy plant loads up with small oval/egg shaped fruit, usually in clusters of two or three. It is one of many Indian eggplant types and also can work for Middle Eastern and Bosnian markets looking for small fruited eggplant to stuff and/or pickle. The small cap is spineless and fruit is easy to pick.
6531NT	LUCILLA Zebra Stripe	63	Smooth teardrop	Purple/ black & glossy	Our favorite feature of Lucilla is a small, spineless cap, along with the super glossy skin that is darker with bright white stripes. Yields are excellent. Fruit can get quite large and still hold quality.
3731NT	GHOST STORY 	63	Round, oval	White	This new white eggplant is a real game-changer. Smooth, firm, and heavy. It has a refined small cap that is usually spineless. Flesh is dense, bright white, and slow to develop seeds. Excellent early and continuous yields.
4004NT	SUPER VIOLET Asian	64	Extra long, cylindrical	Violet	This violet colored Asian-type eggplant is extra long and cylindrical, up to 16" long. Flesh is firm and white with few seeds. Tasty and eye-catching!
8118	SANTANA SEEDWAY EXCLUSIVE	65	Extra large, teardrop	Purple/ black	Versatile in size, Santana can get quite large and hold quality. A healthy plant supports high yields over a long season. The fruit stem and calyx are nearly spineless. Sets freely in adverse conditions.
5496NT	BARBARELLA	65	Round, pleated Sicilian	Violet w/ large white shading	Vigorous, healthy plant bears heavy fruit with dense, delicious white flesh. Barbarella is from Italy and has an authentic Sicilian look with a white halo and shading. Nearly spineless calyx.

The best variety in its class with excellent bolting and tip burn tolerance.

3785XZOR	<b>BENEFINE</b> Endive	Easy to grow finely cut frisee type endive that is slow bolting, good against tip burn and bottom rots. It will form a blanching head that is creamy colored, crunchy-tender, and somewhat mild tasting.
3940XZ	<b>ARTICA</b> Escarole	60 days. Artica is an escarole from Italy bred for cool weather production in spring and fall. The erect habit causes the center to blanch beautifully without additional effort while keeping the head cleaner

7861XZ	<b>OLMOS</b> Escarole	60 days. Olmos is a real step up in escarole, with broad, green, wavy leaves that are more upright than usual. Heads are uniform, fast growing but very slow bolting, tipburn tolerant and readily make a blanching heart. Very uniform.

3737NT	<b>Basil EVI</b>	This is the Downy Mildew resistant basil we have been waiting for! It is a Genovese type with medium-sized smooth, green leaves (slightly backrolled). The fragrance is perfect and clean. Use is versatile including cut, pots, and hydroponic. The habit is semi-compact and the Downy Mildew resistance is strong.
4768OR	<b>Basil PROSPERA® CG1</b>	Prospera® CG1 has a vigorous, upright habit with medium sized leaves. It has a high resistance to Downy Mildew and some resistance to Fusarium
3905OR	<b>Basil PROSPERA® PS5</b>	A medium-compact plant that performs well both as potted as well as fresh-cut production. Leaves are medium sized, slightly spoon shaped, with a very dark green color and a classic Genovese aroma.
3829NT	<b>Basil SUPERBO</b>	Our Superbo is a special selection by an Italian producer's "Genovese Classico". With improved uniformity, Superbo has a medium compact plant and very large, glossy green leaves. The leaves are wide and spoon shaped with an intense flavor. Superbo is the classic basil used for traditional "Genovese" bunching and for "pesto" by the processing market.
6829	<b>Cilantro CRUISER</b>	Cruiser is a bolt-resistant variety that has a more uniform and fancier appearance as compared to Calypso. Even length stems make it very nice to bunch.
7228	<b>Cilantro LEISURE</b>	Leisure is a Santo type at a better price point. We offer a strain that is carefully tended by the producer in the desert southwest.
8335	<b>Cilantro SANTO</b>	Santo is slow-bolting, vigorous, and high quality. Cilantro is used in salsa and spicy foods, and has become a staple among fresh herbs.
4450NT	<b>Chervil MASSA ORIGINAL</b>	Massa is a uniform selection of a smooth leaf chervil. It is used for soups and salads. It is good for summer and also very cold tolerant.
5045	<b>Chives STARO</b>	Fast growing with thick, blue-green leaves. Staro's early vigor makes it excellent for live-plant sales. Staro can be grown over winter in greenhouses and for typical open field production and hydroponic. PERENNIAL.
3899NT	<b> FENUGREEK METHI</b>	Fenugreek is increasingly grown as a green called Methi. We sell an Indian strain that will be consistent from one lot to the next. It is selected to be slow bolting. Methi is direct seeded and grown more or less like cilantro and plant size is affected by spacing. (Tight spacing creates a shoot that is harvested from 8" to 10" tall).

3899NT	Dill DELIGHT	Very late bolting dill, upright growth habit with dark blue-green color, leafy with high yield potential. Suitable for fresh market or processing.
8519	Dill DUKAT	Early with heavy foliage and large umbels. Anthocyanin free (non-purple).
7938	Dill ELLA Plant sale type	Ella is the perfect dill for selling live plants. It is slow-bolting and makes lots of ferny, dark green stems. It is also good for anyone choosing to sell greens only and not needing flowers.
3801NT	Dill HERA	Hera is a favorite variety to use to bunch the ferny greens. Compact, uniform plants grow about 16" tall. It is slow to form a seedhead. Beautiful green and erect.
6414NT	Fennel ORION Bulbing type	80 days from seed, but can be transplanted. Orion forms uniform round bottoms that hold well after bulbing. This is a semi-long day Florence type. In Pennsylvania, we reliably grow good bulbs in spring and fall. Further North it should be seeded mid-June or later. Fennel is very cold tolerant and has little need to be grown in a tunnel, but if it is, it will stay perfectly clean.
4469NT	Fennel DRAGON Bulbing type	75 days from seed. Dragon features medium-fast growth, makes a round bulb and is very slow to bolt. Like Orion, it can be grown in a wide range of conditions and seasons, including spring. It will get large without splitting.
3902OR	Oregano ZAATAR	Soft, oval, gray-green leaves. Intense oregano aroma and flavor, well known for centuries in the Middle East as a culinary and a medicinal herb.
7235NT or 723582XB	Parsley ARAT Root type	Arat has smooth, parsnip shaped roots that are strongly flavored when roasted or used in soups. This is a nice item to take to Farmer's Markets, especially around Northern European populations. Flat leaves are dark green. In addition to being sold by weight and pelleted, Arat is available primed with B-mox. The priming improves germination in both warm and cold soils and B-mox enhances vigor and root growth.
9438	Parsley DARK GREEN ITALIAN	Medium-large, wide, flat leaf. Leaf type is dark green and moderately cut. Smooth and shiny. Upright with more vigorous growth than Italian Flat Leaf.
5737NT	Parsley ITALIAN GIANT SW STRAIN	SEEDWAY's strain of Gigante d' Italia has very good uniformity; a nice dark color and even stems. It has good bolting tolerance and rapid regrowth after cutting. We offer it both primed and primed with mini pellet.
4904	Parsley JADE	Jade is a loosely curled parsley that does well in hot weather. It has parsley late Blight resistance (Septoria petroselini) . It may show several plants with flat leaves if crowded, but the good germination and appearance should compensate for these off-types.
8518	Parsley FOREST GREEN	The standard for curled parsley and has an attractive mixed curl.
4359NT	Parsley KATINKA	Uniform, fast growing, medium-green, double curled parsley. Long and strong stems make this variety appropriate for bunching or for mechanical harvest. We offer Katinka untreated and also primed.

Code	Variety	Leaf Color	Height	Comments
8535	DARKIBOR	Medium green	18" - 24"	The preferred variety for chopping - thinner ribs make for a fancier product. Somewhat looser curl. Despite the name, it is not as dark green as Winterbor and Starbor.
8361	WINTERBOR	Dark green	18" - 24"	With a tall plant and stout, straight leaf (petiole) stems, Winterbor is the preferred hybrid kale for bunching.
8435	STARBOR	Dark blue green	12" - 18"	Uniform stems of even length facilitate a 1-cut bunch, no need to strip and bunch. Classy, very dark green, curly leaves resist yellowing. Good for spring planting since the bolt resistance is excellent and shows good vigor as the weather gets colder. Our most cold tolerant variety.
5345	OLDENBOR	Bright green	18" - 24"	Oldenbor has a very broad frilly leaf. It shows excellent vigor and productivity when growing from cool to warm weather. The extra vigor helps in sandy soils with improved regrowth. It shows resistance to Black Rot and Fusarium.
4176	SUNBOR	Dark purple red	24" - 26"	Very productive with a very attractive and different purple color. It stands out for its superior uniformity. Virtually identical to Redbor but with improved uniformity.
4270NT	SCARLET PREMIUM Pricing On Page 61	Purple red	18" - 20"	Scarlet Premium was selected for use in growing full-sized, beautiful scarlet colored kale. It has good vigor and excellent uniformity.

OKRA

Listed By Maturity - See Pricing On Page 82

Code	Variety	Days	Comments
4062NT	BUFFALO BILL 91	43	Buffalo Bill 91 is a new, early, hybrid okra with a vigorous, open, somewhat short, plant. Pods are dark green and stay tender to a larger size than Clemson Spineless. The leaf petioles (leaf stems) are nearly spineless, so, like a spineless zucchini, Buffalo Bill 91 is more comfortable to harvest. Growers from the mid-Atlantic north and through the mid-west will be able to harvest weeks before Clemson Spineless. Well branched plants contribute to an overall excellent yield. Although okra isn't known to be a transplant crop, it can work, and this would be very good for home garden plant sales.
3647NT	 JAMBALAYA 2.0	50	Jambalaya 2.0 is a hybrid Okra that fruits early on a tidy, bushy plant. Medium green, uniform pods. Early maturity provides for a great yield over a long season.
8641	CLEMSON SPINELESS 80	55	Dark green, straight, slightly grooved, pointed pods are 7" - 8" long and spineless. Plants are heavy yielding and grow approximately 4' - 4½' high.
5736NT	BURGUNDY		The O.P. purple-red Okra. Beautiful ornamental reddish plant fruits early and prolifically.

878100	PEA & BEAN INOCULANT (Treats Up To 50 lbs.)	Using an inoculant results in better plant and root system growth for legumes. Legume plants produce their own nitrogen through a relationship with bacteria called Rhizobia which is in the inoculant as well as in the soil. But, the Rhizobia in the soil are not as active in cool, wet soils. Adding the inoculant gives your legumes a jump start. (This is an all-natural product, but it is not organically certified).	11.42

Technical data and disease resistance ratings shown are averages of results from observations at various locations, under different conditions, and laboratory tests. It is not a prediction of future performance but a summary of past results. Seed performance, yield, and crop results will vary depending on geographic areas, environment conditions and pressure, field growing and management practices, and the presence of pests or pathogens. New, unknown, and/or atypical pathogen strains may overcome the resistance of the seed. Acceptance of the HM.CLAUSE Limitation of Warranty and Liability and Use Restriction, included with our seed packages or available at [www.hmclause.com](http://www.hmclause.com), is a condition of use of all our products.

## HELP RESTORE NUTRIENTS AND INCREASE YIELD POTENTIAL

### COVER CROPS

### SINGLE TYPES

#### ANNUAL RYEGRASS

→ **CENTURION** diploid annual ryegrass was developed for quick establishment, excellent Crown Rust resistance, frost tolerance and high forage yield. CENTURION exhibits excellent seedling vigor, and medium maturity, allowing consistency in forage yield throughout the season with good transition back into warm season forage grasses. **FRIA** is a late maturing, widely adapted annual ryegrass with excellent cold tolerance. Other benefits include improved disease resistance to Crown Rust, Gray Leaf Spot and Helminthosporium Leaf Spot.

#### HAIRY VETCH

→ **Purple Bounty** is a new winter hardy, early maturing hairy vetch variety developed for high nitrogen fixation (up to ½ of a subsequent crop's nitrogen), increased biomass for a thicker mulch and earlier flowering for more flexibility in planting succeeding crops. Vetch forms ground cover slowly in the fall, but root development continues through the winter with substantial growth in the spring. For maximum results, Purple Bounty should be in full bloom to allow for peak nitrogen contribution and to mow, roll or spray for maximum vetch kill. Spring oats or winter grains can also be planted with Purple Bounty to act as a protective cover for improved winter survival and increased erosion control. Purple Bounty is an excellent cover crop for nitrogen fixation, erosion control, bio mass, and weed suppression.

#### PHACELIA

→ Phacelia is a plant that is native to the United States, but was adopted and improved by Europeans for use as a cover crop. Phacelia is quick to establish and will winter kill at 18° F. Phacelia is an excellent source of high quality nectar and pollen; and as a result is excellent at increasing the population and diversity of beneficial insects. Phacelia will begin flowering 6-8 weeks after emergence and will continue to flower for 4-6 weeks. Phacelia is comparable to buckwheat in many ways, but is more tolerant to cold and drought. Phacelia can also be used for forage, as a green manure crop, nematode control, and a nitrogen trap crop.

#### OATS

→ Oats are very versatile as they can be planted at various times of the season and used as an excellent cover and forage crop. Oats work well alone, but especially well in mixes with radishes, turnips, Berseem clover, Crimson clover and Austrian winter peas. Oats perform well for erosion control and are very good nutrient scavengers. Oats (and mixes with radishes or turnips) work very well for manure nutrient management.

#### TRITICALE

→ Triticale is a hybrid small grain produced by crossing wheat with rye. The name "triticale" is derived from the combined scientific names of the two crop species wheat and rye. The versatility that triticale offers as a grain, a forage, for straw and as a cover crop adds to the economic viability that sustains the interest in the crop.

#### BUCKWHEAT

→ Buckwheat, when used as a cover crop, can reduce both the emergence and growth of weeds, thereby presenting an easy and economical alternative to herbicides. Buckwheat, a short-duration broadleaved, annual species, provides very effective weed suppression due to its rapid early growth that establishes a canopy faster than many weeds.

#### CRIMSON CLOVER

→ Crimson clover has erect stems, grows quickly and has larger seeds than the more commonly used red clover. Crimson clover's primary advantages are rapid growth during cool weather, shade tolerance and good reseeding potential. Crimson clover can be planted in early spring or fall for weed control. Because of its shade tolerance and reseeding potential, Crimson clover is also effective as a living ground cover in orchards. Crimson clover has been used effectively to suppress weeds when planted in the early fall following a short-season crop such as potatoes, snap beans, vegetables or following winter wheat. Planting with a grass such as oats, which is also fast-growing, gives additional weed control in these situations.

#### AUSTRIAN WINTER PEAS

→ Austrian winter peas are a cool-season, annual legume with good nitrogen-fixing capabilities. Austrian winter pea is a low-growing, viney legume and has been shown to fix over 200 lbs. of nitrogen per acre per year under good conditions. It has hollow, slender and succulent stems, 2 to 4 feet long. The foliage is pale green and the flowers are colored, usually purple, pink or reddish. The leaf consists of one to three pairs of leaflets and terminal branched tendrils. Pods are 1.5 to 2.5 inches long with three to five round, dark-colored seeds. Seed color is commonly gray with purple or brown mottles.

#### CEREAL RYE

→ Cereal rye is a fall planted, winterhardy species with deep root penetration. The extensive root system enables cereal rye to capture high levels of nitrogen and other nutrients from the soil and reduces soil compaction issues. Cereal rye has the added benefit of late fall and early spring grazing as well as spring silage or hay.

#### CALIENTE 199 Mustard Blend

→ Mustard blend used as a green manure crop and biofumigant. Produces excellent biomass with good management. Caliente 199 glucosinolate production among mustards in its class, and as part of an integrated program, can reduce nematode populations and suppress weeds and diseases including Verticillium Wilt, Silver Scurf, and Sclerotinia. Best results require good management including flail chopping, tillage and rotation. For the biofumigant to work, irrigation or light rain is needed directly after chopping and incorporating into the soil.

#### SUNN HEMP

→ Sunn hemp is an excellent cover crop variety which produces large amounts of biomass through warmer conditions. Sunn hemp will scavenge available nitrogen and will fix nitrogen when nitrogen is lost. Sunn hemp will hold and produce sufficient nitrogen to provide nitrogen credit for the following crop.

## SUNFLOWERS

Code	Variety	Comments
6130NT	FLORISTAN	A lovely and early flowering variety on a 3.5' to 4.5 foot branched plant. While flowers won't last long when cut, the stems are strong and the flowers are pretty dusty-dark rose and cream color.
3911NT	PROCUT® HORIZON	ProCut Horizon is a traditional yellow sunflower hybrid, with heads that face up on a single sturdy stem. It is pollenless for cut-flowers. It is day length neutral, meaning it can be grown over winter in frost free areas and for late fall crops in the north. It is very uniform with a slightly smaller flower than ProCut Orange. 4 to 6 feet.
5946NT	BLACK OIL SEED	Makes a nice addition to sunflower mazes and also used for microgreens. Multibranched with flowers sized 4"-9". Gold flowers with brown center. Height 4 to 6 feet.
4159NT	SUNRICH GOLD	Early blooming and stunning with medium-large heads held upright on sturdy single stems. Golden Yellow with a yellow center. Pollenless flowers have great shelf life (and bloom a long time in the field). Grows 4.5 to 5.5 feet.
5421NT	SUNBRIGHT SUPREME	Sunbright Supreme is a proven variety for single stem cut flowers. The flowers are quite uniform in maturity and size.
4421NT	FULL SUN IMPROVED	Full Sun is used for cut flowers in cooler weather in the south, where it matures predictably with low light. Pollenless. 47" to 78" tall. When grown in winter, stems are shorter but always long enough for a perfect, pollenless flower.
3665NT	 CONCERT BELL	Concert Bell puts on quite a performance with a unique flowering habit and pollenless flowers. Sprays of 10 to 12 flowers grow atop an erect central stem. It is early to flower. Plants grow to a uniform height of 5 to 6 feet. If used as a cut flower, Concert Bell makes an instant, ready-made bouquet from just one cut. Typically, excellent seed germination makes this easy to grow. Plan on multiple sowings for a continuous supply of bloom through the end of summer. AAS winner from 2022 trials. It is an unusual combination to have a pollenless sunflower with more than one flower head per plant.
6646NT	TEDDY BEAR	Fantastic for potted plant sales or as a border, Teddy Bear has shaggy golden flowers on compact, 3' to 4' plants with dense large leaves. Despite the small size, it is late maturing at 75 – 80 days.
3567NT	 MIDNIGHT ROUGE	Midnight Rouge is a striking nearly black to rich-burgundy colored sunflower with a velvety look. It is primarily single-flowered but will branch with extra space. Flowers are 4" to 6" across and plants are 4 to 6 feet tall. It makes a beautiful and long-lasting cut flower but will drop some pollen. It is ornamental in the garden, or field, with darker shading to the leaves and stems.

HR - High Resistance. The plant can resist the growth, development or the damage caused by the pathogen.  
IR - Intermediate Resistance. The plant will show fewer symptoms than a non-resistant or susceptible variety.

Abiotic (AB) - Physiological or environmental conditions that may cause a plant to express signs of stress or limits its growth or development.

Our seed, unless specified by the customer, will be treated with our standard seed treatment. Our standard treatment can be one or multiple fungicides depending on the variety; some treatments have insecticides included with fungicides for added protection. Encrustments, pelleting and priming treatments are also available in addition to the standard treatment options. Although SEEDWAY will not guarantee in stock inventory of a variety with a specific seed treatment, treatment & pelleting can often be arranged if adequate lead time is allowed prior to delivery. Minimum order amounts will apply.

Please check catalog listings & price list for more complete outline of cabbage varieties generally stocked as HWT; lettuce, pepper and tomato varieties generally stocked as pelleted, watermelon varieties generally offered as primed, and corn varieties generally offered with Cruiser or Poncho as the standard treatment.

**Pelleting** - A coating on the seed to help increase seed size for mechanical planting. With uniform seed shape and size, planting placement is greatly improved. Within the pelleting material, seed treatments such as insecticides and/or fungicides are often added for protection against pathogens.

**Encrustments** - A coating that minimally increases seed size & makes irregular or disfigured seed uniform. This helps to aid with mechanical seed sowing. There is no seed treatment added to the encrustment material.

**Filmcoating** - A thin polymer that binds treatment to the seed; this helps reduce the removal of treatment while the seed is being handled. Filmcoat is standard on most seed. The treatment is usually a bright color that also helps to see the seed after it has been sown.

**Farmore** - Name brand given to a group of seed treatments that provide either fungicidal or a combination of fungicidal and insecticidal properties. Farmore treatment packages are listed below.

**Farmore F300** - A fungicide seed treatment added to vegetable crops such as carrots, lettuce, melons, onions, peppers, tomatoes & squash. Protects against the following: *Alternaria*, *Aspergillus*, *Botrytis sp.*, *Damping-off*, *Fusarium*, *Penicillium*, *Pythium*, *Rhizoctonia*, *Sclerotinia*.

**Farmore FI400** - A combination fungicide & insecticide seed treatment applied to vegetable crops such as cucumber, pumpkin and squash, among others.

**Protects against the following diseases:** *Alternaria*, *Aspergillus*, *Botrytis sp.*, *Damping-off*, *Fusarium*, *Penicillium*, *Pythium*, *Rhizoctonia*, *Sclerotinia* **and the following insects:** *Aphids*, *cucumber & flea beetles*, *leaf miners*, *seed corn maggots*, *thrips*, *white flies & wire worms*.

**Farmore FI500** - A combination fungicide and insecticide seed treatment used specifically on onion seed. Spinosad insecticide is added to the FI400 formulation for control of onion pests. **Protects against the following diseases:** *Fusarium*, *Damping-off*, *Pythium*, *Rhizoctonia* **and the following insects:** *early season thrips*, *onion maggot*, *onion thrips & seed corn maggots*. **Due to Canadian regulations this treatment is NOT permitted in Canada.**

**Trigard** - Insecticide that controls onion maggots. This is added during the pelleting & encrustment process in onions.

**Pro-Gro** - Combination of Carboxin and Thiram added to pelleted onions to control onion smut.

**Cruiser/Poncho** - Systemic insecticides used on beans and corn to prevent injury from flea beetles & soil insects such as wire worms, seed corn maggots, white grubs.

**Priming** - A technique used to jump start the germination process. This reduces the time it takes seed to germinate & also increases plant uniformity. Priming can be used on cabbage, carrots, leeks, onions, parsnips & watermelons.
