VT Double PRO® RIB Complete®

The current yield pacesetter for grain yield in the maturity comes with the highest recommendation. A leafy, robust plant that puts on a large, flexy ear with both length and girth. The deep kernels release their moisture quickly after grain fill is complete resulting in a softer kernel texture and more moderate test weight. All this adds up to a silage ration rich in grain with a lot of readily available starch in the ration. Responds to good management with higher yields, but also good on stress. Only available in a VT Double PRO® RIB Complete® technology trait package so use where Corn Rootworm is not a concern.
