RELATIVE MATURITY
84 DAYS**SW 8400***Conventional*

Early conventional option with strong agronomics and consistent performance across environments and soil types for grain or silage. A good-sized plant sports an ear with flex positioned at a more moderate height and produces high quality forage. Ears hang out between the rows with husks that flare open to reveal well-filled tips with predictable drydown and solid test weight. Strong out of the ground with solid stalks and roots plus plant intactness right through harvest. Optimum performance on the more moderate yield acre with a good supporting plant population and keep North.
