

**ORCHARDGRASS**

# Sunset

LATE MATURITY

Sunset is an improved late maturing orchardgrass that is an excellent choice for hay, pasture and silage. Combining good seedling and plant vigor, foliar disease resistance and stand persistence, Sunset is widely adapted throughout the United States and Canada. Ideal for planting straight or in mixes with other grasses and legumes. When planted with a legume, the ability to produce a higher forage quality product is achieved throughout the growing season.

## Key Characteristics:

- Good seedling and plant vigor
- High forage yield potential
- Improved foliar disease resistance
- Great stand persistence
- Ideal for alfalfa and clover mixes

CUTTING MANAGEMENT

2 - 3
