

**TALL  
FESCUE**

**ARIDO™**

**MEDIUM-LATE MATURITY**

**SEEDWAY®**  
EST 1963

**Arido™ is a medium-late maturing, high yielding tall fescue under both irrigated and non-irrigated environments. Endophyte-free tall fescue variety selected for its tolerance to dryland conditions. Its heading date is 4 days later than KY-31, and 5 days later than Fawn. It reaches 50% pollen shed approximately 3 days later than KY-31, and 4 days later than Fawn. Arido™ is taller in plant height than KY-31 and Fawn, with a longer panicle, and a Longer and wider flag leaf. Seeding Rate: 10-30 lbs. per acre.**

- **Excellent tolerance to dryland conditions**
- **Excellent selection for grazing or hay**
- **High yielding**
- **Increased milk and meat production**
